A Project Report

On

PINGALWARA MANAGEMENT SYSTEM

Submitted in partial fulfillment of the requirements for the

award of the degree of

MASTERS OF COMPUTER APPLICATIONS

in

Session: 2021-2022

By

VAIBHAV

20MCA1024

Supervised By:

Mr. Bachandeep Singh Bhathal

**CHANDIGARH
UNIVERSITY**

Discover. Learn. Empower.

University Institute of Computing

CHANDIGARH UNIVERSITY, GHARUAN, MOHALI, PUNJAB, 140413

Project Coordinator

Head-UIC

Acknowledgement

I am grateful to **CHANDIGARH UNIVERSITY, GHARUAN** for providing me the opportunity to undertake the project at their organization and for allowing me to use all their resources during the course of the project.

I also take this opportunity to express my sincere, humble and deepest gratitude to **MR. Bachandeep Singh Bhathal**, our project managers for assigning me the project and assisting throughout the time period of my project.

I find it difficult to verbalize the deepest sense of indebtedness to my family and friends for their boundless love and support, which has always been a source of inspiration and kept me going to complete this venture.

And above all I must acknowledge with complete humility, the power and the mental ability given to me by the Almighty in completion of project as well as writing the report.

Introduction

This project entitled “Pingalwara Management” is for All India Pingalwara Charitable Society (Regd) Amritsar is to develop its social services in a more effective manner. So that they can improve society without any poverty and illiteracy. The module is used to display the information like their name, place, history of the Trust, when they established their organization, president of the organization, vice president, number of members of the Trust, etc. Past work module is used to display the Pingalwara’s exiting service for society. It deals with the service of their poor people, illiterate people, and how they served their society. On going Programs is told about the currently running programs of this organization. It supports various programs of Education, Sports, Health and Awareness etc. The photo gallery is used to display their collection of photos of their good work done for the society. It tells their organization services in a more accurate way. It also provides materials for Awareness. Feedback is used to get the customers opinions. So that it can improve its functionality in a more accurate and easiest way. Based on the Customer feedback it can easily develop their services for society.

Pingalwara is a house for destitute in Amritsar in northern Indian state of Punjab. Pingalwara is working very compassionately for orphan, destitute, old age, mentally challenged, abandoned children and persons suffering from diseases.

Education standard of government run schools is very low and the poor people cannot afford to send their children to private schools. With this in view, Pingalwara is running Four schools where free education is provided. We provide detail of these school run by Pingalwara trust. User can fill enquiry form for admissions. User can also take test to check eligibility.

UNIVERSITY INSTITUTE OF COMPUTING

DIVISION- MCA/BCA/BSc(CS)

Objective

- I. To promote primary and higher education among the visually challenged, differently-abled and economically underprivileged people.
- II. To encourage sports and games for people with disabilities, especially the visually challenged.
- III. To empower visually challenged, differently abled and economically underprivileged people through development initiatives focusing on educational, social, economic, cultural and technological aspects Vision.
- IV. An inclusive society free of discrimination against the differently-abled. Where people with Disabilities, especially the visually challenged, enjoy equal opportunities and an enhanced quality of life

Project features for identification of uniqueness

- **Past work:** Admin portal Adds the old work data using this admin module. It Contains Information about the Event id, Event Name, Event Description, Start Date, End Date.
- **Ongoing/Upcoming events Program:** In this module, the admin adds the current or upcoming events information.
- **Photo Gallery:** The admin adds the photos and Video of visitors, activities of Pingalwara
- **Volunteer:** The volunteers sponsors register their information to this volunteer portal. This information included the details of the person who want to do volunteering.
- **Free Literature:** it provides Free Literature of Pingalwara
- **Donation:** User can give online Donation by Web platform
- **Join Our Trust:** People can send request with cv to join our trust
- **Admission Enquiry:** User can send Admission enquiry for education institute.
- **Eligibility test:** User can also take eligibility test for admission
- **Ref Material:** Pingalwara has its own printing press where 20,000 pages are printed every day for free distribution amongst the general public. user can download this reference material and free books.
- **Branch's:** Provide Detail of domestic and overseas branches
- **Articles & News:** it provides articles for awareness and trust related news

UNIVERSITY INSTITUTE OF COMPUTING

DIVISION- MCA/BCA/BSc(CS)

Gaps in the Existing System

EXISTING SYSTEM

Generally, all the Non-governmental activities information like old(past) work and current ongoing work information and details are organized manually by these organization. But it takes extra time to preserve these records or data and very difficult to find the details for various particulars. Everything is to be done physically, so it is very burdensome to maintain the records. It's also very difficult to find the activities

PROPOSED SYSTEM

The proposed system is developed to overcome the demerits of the existing specified earlier. This system is being created using PHP and My SQL. Since PHP is our Front-End it looks more look and feels for the web application is very Effective & Security. This look and feel of it is more users friendly and easy to operate on. We can create dynamic and Interactive user application using PHP. This project is easy to use ,reliable and flexible. So it is easy to store and retrieve the huge amount of data.

- Takes less time to do the processes and faster than the existing system.
- Speed and accuracy is increased from the other existing systems
- It is fully automatic and easy to use.

UNIVERSITY INSTITUTE OF COMPUTING

DIVISION- MCA/BCA/BSc(CS)

Modules

The system has two major actors and each actor has its features to carry out as follows:

Admin

- Login to System
- Manage School details
- Add Team Members Details
- Manage Staff Details
- Update test Question Set
- View Donation Reports
- View Volunteers Request
- View Admission Enquiries
- Manage Branch Details

Staff

- Login to System
- Manage Profile
- Add Image & Video's to Gallery
- Manage Events Information
- Upload Reference Material
- Update Articles & News

UNIVERSITY INSTITUTE OF COMPUTING

DIVISION- MCA/BCA/BSc(CS)

Hardware and Software Requirements:

Hardware requirements:

- Free Disk Space: Minimum 300MB of free disk space for installation.
- Installed Memory (RAM): Minimum 512MB of RAM required.
- Processor: Intel Pentium 4 or above

Software Requirements:

- Operating System: Windows XP/Vista or Windows 7/8/8.1/10/11.
- Web Browser (Google Chrome / Mozilla Firefox etc)
- Xampp Server 3.1
- Brackets (Text Editor)/Notepad ++

UNIVERSITY INSTITUTE OF COMPUTING

Front End And Back End

Front End :-

HTML Html (Hyper Text Markup Language) mainly use for design a client side web pages, this is a static page it means you can only view Html page not give request and not get response from server using html page. Using Html pages browser get user information through form (This is an Html element). Html provides so many elements (like <p>, , <h1>) to design a web page.

Tim Berners-Lee is known as father of HTML. The first publicly available description of HTML was a document called "HTML Tags", first described, on the Internet by Berners-Lee in late 1991.

HTML5 is the latest version of Hypertext Mark- up Language, the code that describes web pages. It's actually three kinds of code: HTML, which provides the structure; Cascading Style Sheets (CSS), which take care of presentation; and JavaScript, which makes things happen.

Cascading Style Sheets (CSS) is a style sheet language used for describing the presentation of a document written in a mark-up language. Along with HTML and JavaScript, CSS is a cornerstone technology used by most websites to create visually engaging webpages, user interfaces for web applications, and user interfaces for many mobile applications.

CSS is designed primarily to enable the separation of presentation and content, including aspects such as the layout, colours, and fonts. This separation can improve content accessibility, provide more flexibility and control in the specification of presentation characteristics, enable multiple HTML pages to share formatting by specifying the relevant CSS in a separate CSS file, and reduce complexity and repetition in the structural content.

JavaScript often abbreviated as JS, is a high-level, dynamic, weakly typed, prototype-based, multi-paradigm, and interpreted programming language. Alongside HTML and CSS, JavaScript is one of the three core technologies of World Wide Web content production. It is used to make webpages interactive and provide online programs, including video games.

JavaScript is a object-based scripting language. It is light weighted. Using HTML we can only design a web page but you can not run any logic on web browser like addition of two numbers, check any condition, looping statements (for, while), decision making statement (if else) at client side. All these are not possible using HTML So for perform all these task at client side you need to use JavaScript.

UNIVERSITY INSTITUTE OF COMPUTING

DIVISION- MCA/BCA/BSc(CS)

Bootstrap is an open source toolkit for developing with HTML, CSS, and JS. Quickly prototype your ideas or build your entire app with our Sass variables and mixings, responsive grid system, extensive prebuilt components, and powerful plugins built on query. Bootstrap is a front-end library for designing websites and web applications. It contains HTML and CSS based design templates for typography, forms, buttons, navigation and other interface components, as well as optional JavaScript extensions.

PHP stands for Hypertext Pre-processor, is widely- used open source general- purpose scripting language that is especially suited for web development and can be embedded into HTML. PHP is a server-side scripting language designed for web development. It was originated by Ramus Leadoff in 1994, the PHP reference implementation is now produced by The PHP Group. While PHP originally stood for Personal Home Page. PHP code may be embedded into HTML code, or it can be used in combination with various web template systems, web content management system and web frameworks. The web server combines the results of the interpreted and executed PHP code, which may be any type of data, including images, with the generated web page..

Features of PHP

- It is very simple and easy to use, compare to other scripting language it is very simple and easy, this is widely used all over the world.
- It is an interpreted language, i.e. there is no need for compilation.
- It is faster than other scripting language e.g. asp and jsp.
- Its Open Source, means you no need to pay for use php, you can free download and use.
- Its Platform Independent PHP code will be run on every platform, Linux, Unix, Mac OS X, Windows.
- PHP is case sensitive scripting language at time of variable declaration.
- PHP have some predefined error reporting constants to generate a warning or error notice.
- PHP provides access logging by creating the summary of recent accesses for the user.
- PHP supports variable usage without declaring its data type. It will be taken at the time of the execution based on the type of data it has on its value.

Back End:-

MySQL is a fast, easy-to-use RDBMS being used for many small and big businesses. MySQL is developed, marketed, and supported by MySQL AB, which is a Swedish company. My SQL is also used in many high-profile, large-scale websites, including Google, Facebook, Twitter, Flickr and You tube. My SQL database include: TYPO3, MoDx, Joomla, Wordpress, phpBB, MyBB, Drupal and other software. MySQL is a freely available open source Relational Database Management System (RDBMS) that uses Structured Query Language.

MySQL runs on virtually all platforms, including Linux, UNIX, and Windows. Although it can be used in a wide range of applications, MySQL is most often associated with web-based applications and online publishing and is an important component of an open source enterprise stack called LAMP. LAMP is a Web development platform that uses Linux as the operating system, Apache as the Web server, and MySQL as the relational database management system and PHP as the object-oriented scripting language.

MySQL is becoming so popular because of many good reasons:

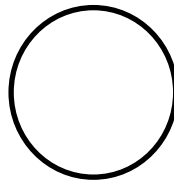

- MySQL is released under an open-source license. So you have nothing to pay to use it.
- MySQL is a very powerful program in its own right. It handles a large subset of the functionality of the most expensive and powerful database packages.
- MySQL uses a standard form of the well-known SQL data language.
- MySQL works on many operating systems and with many languages
- MySQL works very quickly and works well even with large data sets.

Data Flow Diagram

DFD is an elegant modelling technique that can be used only to represent the results of structured analysis of a software problem but also useful for several other applications such as showing the flow of documents or items in an organization.

Symbols Used For Constructing DFDs

- **Function Symbol-** A function is represented using a circle. This symbol is called a process or bubble. Bubbles are annotated with the names of the corresponding functions.

- **External Entity Symbol-** An external entity such as a librarian, a library member, etc is represented by a rectangle. The external entities are essentially those physical entities external to the software system which interact with the system by inputting data to the system or by consuming the data produced by the system.

- **Data Flow Symbol-** A directed arc (or an arrow) is used as a data flow symbol. A data flow symbol represents the data flow occurring between two processes or between two external entity and a process in the direction of the data flow arrow. Data flow symbols are usually annotated with the corresponding data name.

- **Data Store Symbol-** A data store is represented using two parallel lines. It represents a logical file. That is, a data store symbol can represent either a data structure or a physical file on disk. Each data store is connected to a process by means of a data flow symbol. The direction of the data flow arrow shows whether data is being read from or written into a data store

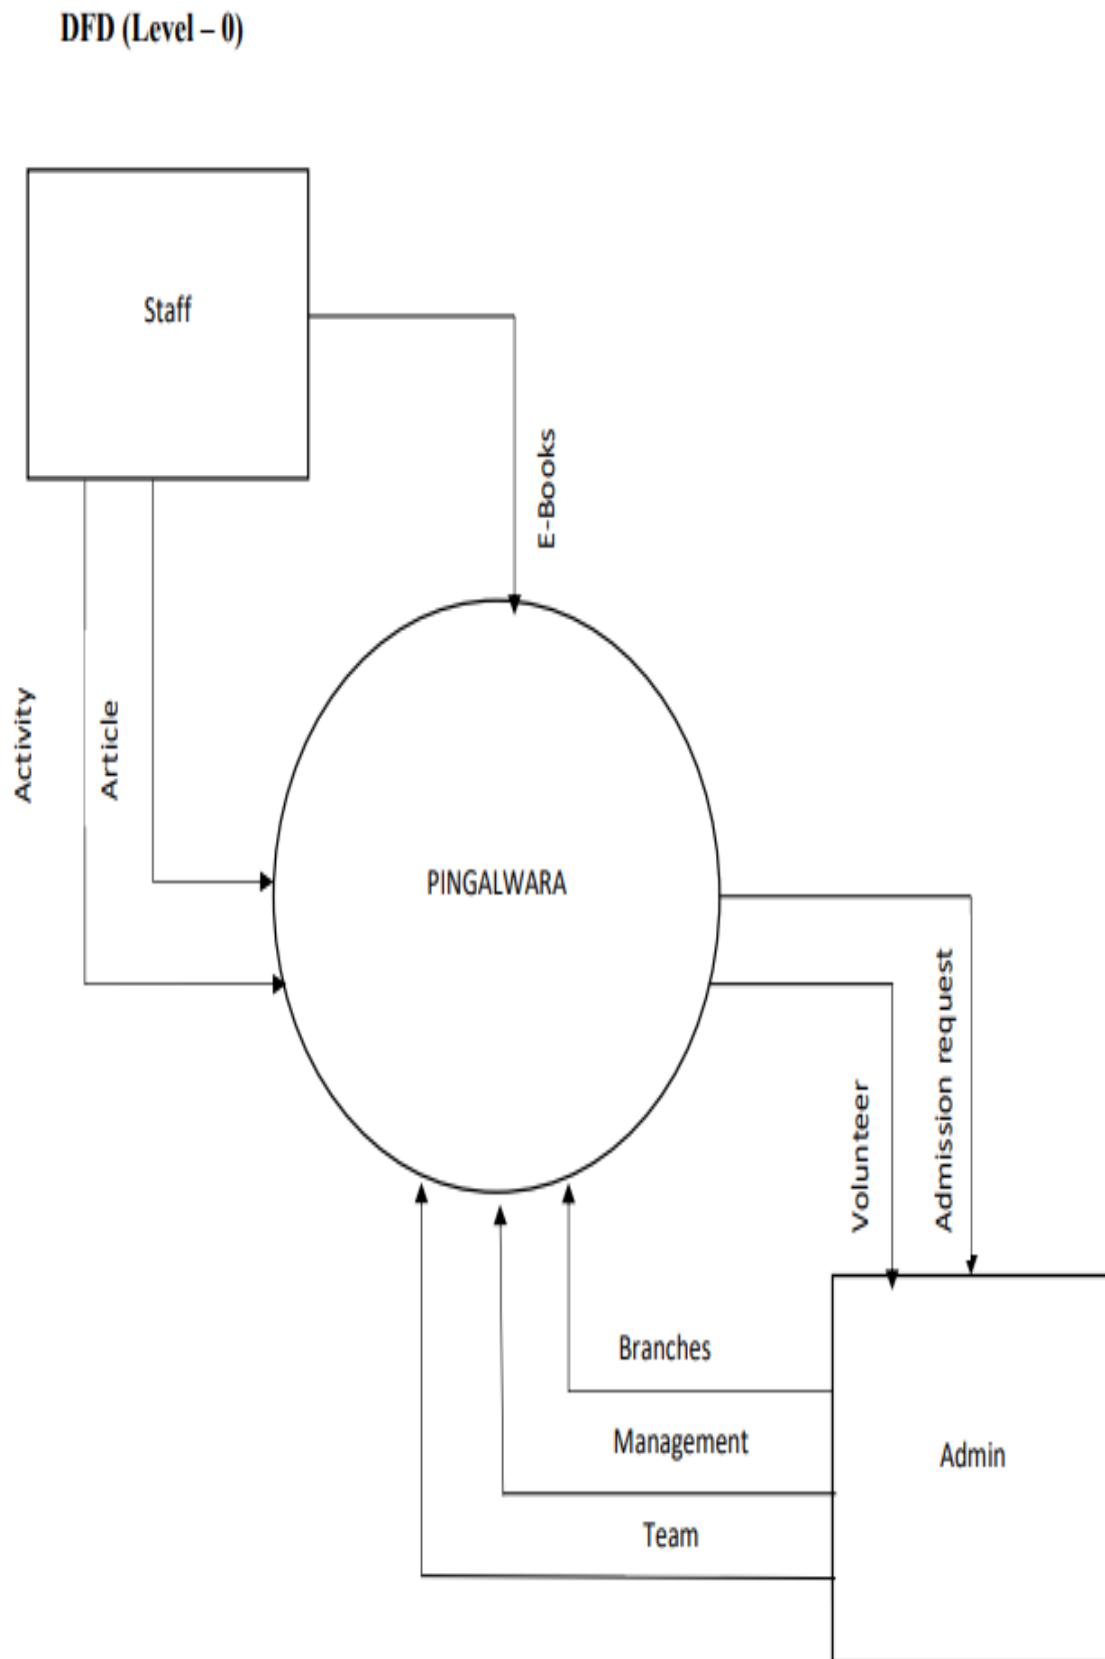

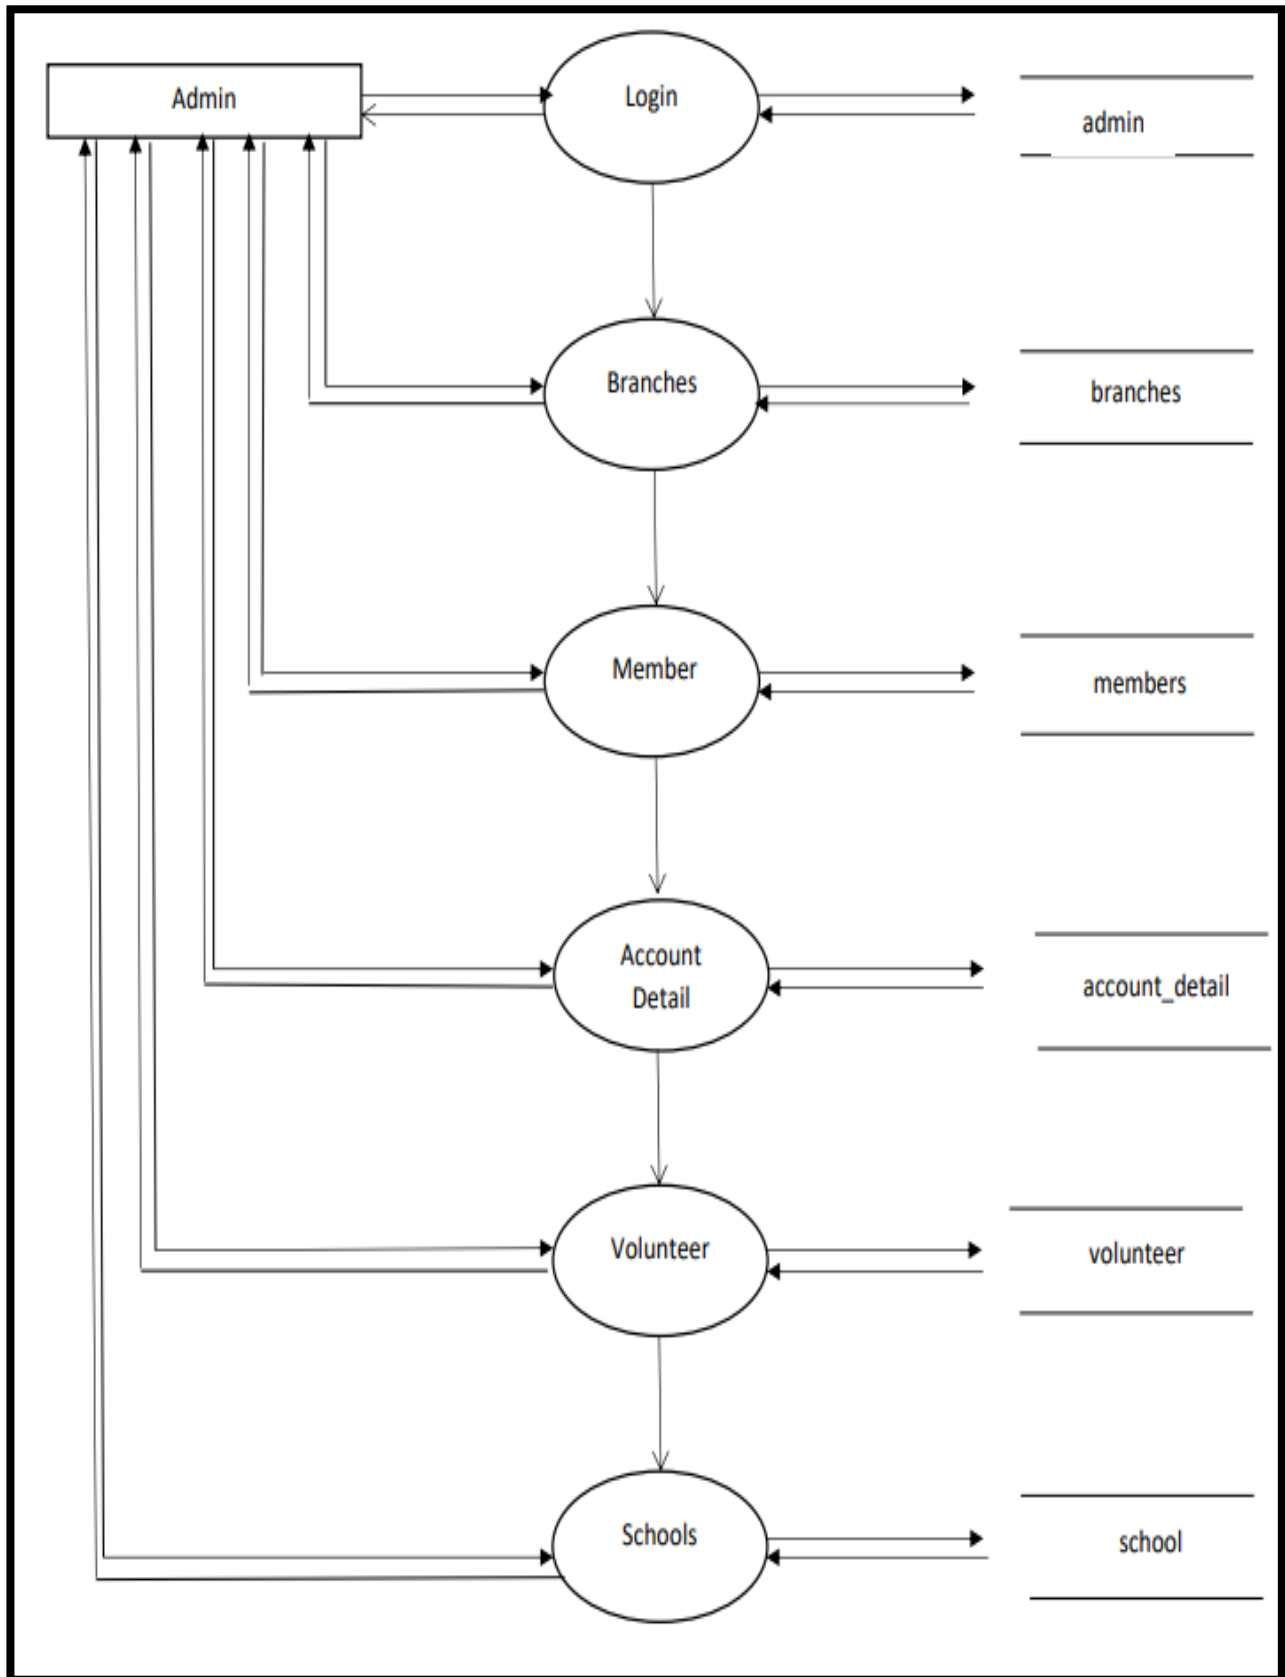

UNIVERSITY INSTITUTE OF COMPUTING

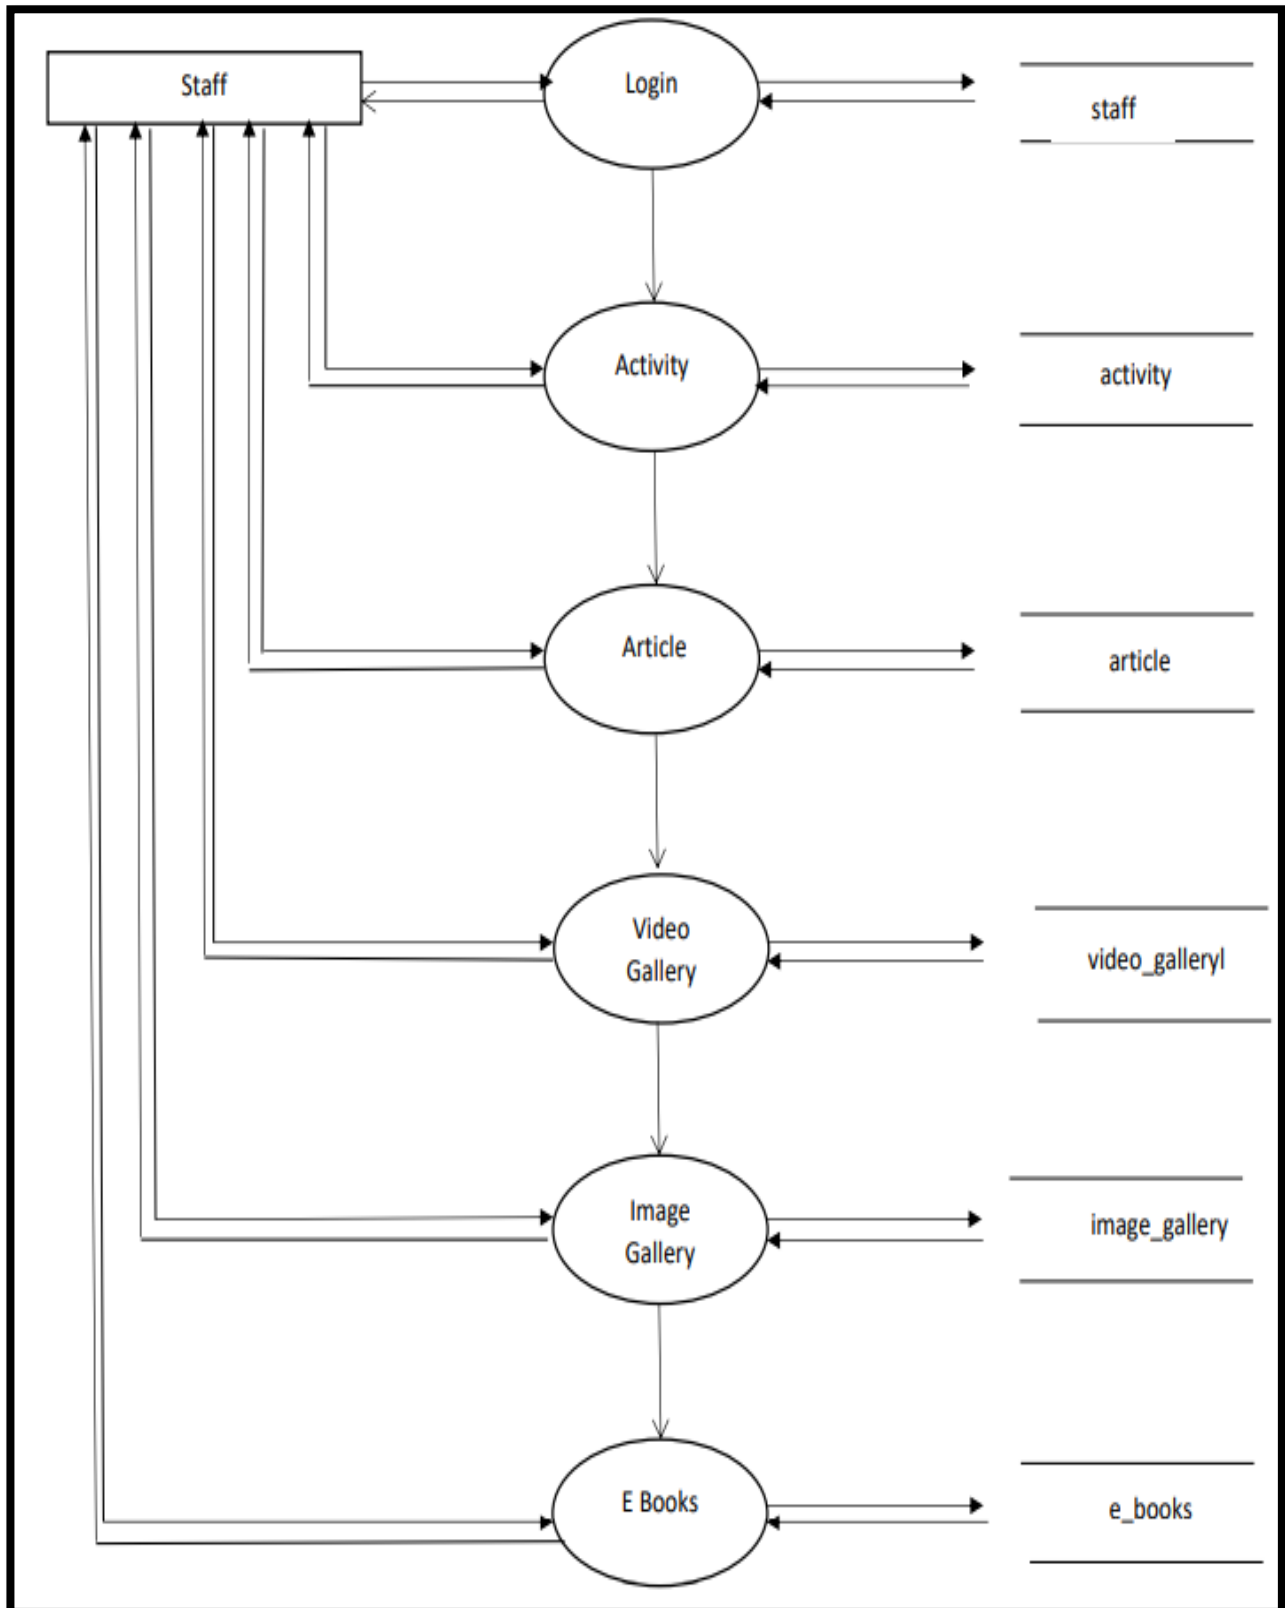

DIVISION- MCA/BCA/BSc(CS)

- **Output Symbol-** The output symbol is used when a hard copy is produced.

<h3 style='color:mediumpurple;font-family:serif; letter-spacing:2px;font-variant:small-caps'>All India Pingalwara Charitable Society (Regd) Amritsar.</h3>

<p> Pingalwara means a home for the disabled, handicapped or crippled. The residents of Pingalwara in addition to being disabled, handicapped and crippled people, also include persons suffering from incurable and terminal diseases, old people, young and healthy males, females and children. Almost all the residents are destitute and most of them are going to spend their entire life in Pingalwara.</p>

<p>The concept of Pingalwara started forming in Bhagatji's mind when the Almighty entrusted him with the care of an abandoned spastic child in front of Gurdwara Dehra Sahib (in Lahore, Pakistan) in 1934. For 14 long years, Bhagatji carried the child on his back as the child was completely helpless and there was no one else to look after him.</p>

Conclusion: -

NGO's like Pingalwara are playing an important role in rural development, including various subjects like farm development, agricultural extension programme, irrigation, water-shed development, energy conservation, environment protection, socio-economic empowerment of under-privileged, housing, education, health, mass awareness against addiction, livelihood activities, women-empowerment, community development, formation of SHGs, self-employment and entrepreneurial development programme etc. But still the work to be done is vast and wide.

From the above study we can say that Pingalwara is doing good job towards the future of the disabled children. We can also conclude that the organization requires more awareness and services regarding education.

Future Scope:-

Nothing can be ended in a single step. It is the fact that nothing is permanent in this world. So this project also has some future enhancements in the evergreen and booming IT industry. Change is inevitable. The project Pingalwara management system has been developed as per the requirement specification. It has been developed using PHP and MySQL .The future scope of the project Pingalwara is very wide .there are many additional features, which are planned to be incorporated during the future enhancement of this project the Future version of System we can add following modules:

1. One can extend this project with any of the new article & video.
2. We can make this project to support latest events.
3. This project can be made more user friendly than now.
4. We can add online shopping feature, People can buy handmade material which is made by special students.
